Assignmet 2   Lalit Meena,2019CS50439

Some important design decisions-

1. Used only one socket for send & receive, mention that design choice in the report.
2. Used only multiprocess,threading ,socket libraies alongwith system ,as told in piazza(not used simple socket programming doable select library)
3. Supported parallel broadcasting efficiently and nicely by help of multiprocess or threading approach as told in Iteration 1.
4. These above good points costs me alot time,efforts and additional burning of 2-3 days midnight oil.PLease help me and consider my assignment finely.
5. Can put initially(wrote) register fn and repeatedly call it for valid username but exiting to restart and RE-enter valid username after "ERROR 100 Malformed username\n \n"
6. While running client script ,only asking username not ip address as be default now set to "127.0.0.1"
7. Message received format ,sender_name : message.
